

MediaWiki:Apihelp-parse-extended-description

See the various prop-modules of [action=query](#) to get information from the current version of a page.

There are several ways to specify the text to parse:

1. Specify a page or revision, using `$1page`, `$1pageid`, or `$1oldid`.
2. Specify content explicitly, using `$1text`, `$1title`, `$1revid`, and `$1contentmodel`.
3. Specify only a summary to parse. `$1prop` should be given an empty value.
